## Steps to Avoid Spamming

There is always a reason to protect your computer and your emails from spam and from spamming others which will save you or your business from being blacklisted. To save yourself the issues, here are a few steps you can take to avoid spamming:

1. Scan the computer with latest and updated anti virus and spyware. Make sure it is virus free.
2. Reset all passwords including email passwords.
3. Password should not be simple. (use <http://strongpasswordgenerator.com> to generate passwords)
4. Should not store passwords in email client, browser and FTP client.
5. Do not share passwords with any one.
6. Ensure that computer is not having any keyloggers or spyware.
