## How to create a 301 redirect in Plesk

In Plesk 10

1. Login to plesk panel and select the desired domain.
2. Click the Websites & Domains tab.
3. Click Add New Domain.
4. Specify the following:

In the Domain name box, type the domain name that you have registered with your service provider or a domain name registration company.

Under 'DNS server configuration', select the option 'Keep master DNS zone' on this server.

Under 'Hosting type', select the 'Forwarding' option.

In the 'Destination address' box, type the Internet address to which you want to redirect visitors.

Under 'Forwarding type', select the preferred type of forwarding.

With standard forwarding, a user is redirected to the site and the actual site's address is shown in the user's browser, so the user always knows that he or she is redirected to another address. With frame forwarding, a user is redirected to the site without knowing that the site actually resides at another location, therefore, frame forwarding should be preferred.

5. Click OK.

To create a Domain Forwarder with an Existing Domain

=====  
==

1. Go to 'Websites & Domains' tab.
2. Scroll to the bottom and click on the domain name in the list.
3. Click the '[Change]' link next to the 'Hosting type' field.

Note: You cannot change the Hosting Type for your primary domain.

4. Specify the following:

Under 'Hosting type', select the 'Forwarding' option.

In the 'Destination address' box, type the Internet address to which you want to redirect visitors.

Under 'Forwarding type', select the preferred type of forwarding.

5. Click OK.

To create a new 301 redirect in plesk 11.5 and above

=====  
==

# Web Hosting

1. Login to Plesk control panel.
2. Select the domain from domain's tab.
3. Click on 'Websites & Domains' menu.
4. Click on 'Add New Domain Alias' option.
5. Type new domain name in the 'Domain alias name' field.
6. If you don't want to redirect the domain alias to the primary domain, please uncheck the 'Redirect with the HTTP 301 code' check box.
7. Click on 'OK'.
