## Magento mysql backup fails to restore

Magento mysql backup may fail to restore with following error if mysql backup was taken using simple "mysqldump" command.

```
=====
ERROR 1005 (HY000) at line 4367: Can't create table 'db_name.core_session'
(errno: 121)

ERROR 1005 (HY000) at line 4367: Can't create table 'db_name.core_store_group'
(errno: 121)
=====
```

## Solutions

1. Use a backup created using magento backup tool
2. Use the script [http://files.bytehouse.co.uk/dump\\_magento\\_database.sh](http://files.bytehouse.co.uk/dump_magento_database.sh) to create a mysql backup

```
=====
wget http://files.bytehouse.co.uk/dump_magento_database.sh

bash dump_magento_database.sh

=====
```

Just run script as "sh dump\_magento\_database.sh".  
Script will ask for mysql user name, password, mysql hostname, database name  
Once the details are provided, script will take backup

## Credits

dump\_magento\_database.sh script is a modified version of <https://gist.github.com/steve-ross/9958274>
