Features of different SSL certificates provided by Bytehouse

Bytehouse offers different types of SSL certificates.

- SSL123 - It is a basic SSL certificate. This SSL certificate will work fine in all common browsers(Edge, Chrome, Firefox, IE etc) & platforms(Eg: Windows, Linux, Mac, Android etc). SSL123 provides Secure Encryption and Domain validation. SSL for www.domain.com protects domain.com also.
- SSL Web Server Certificate - This certificate has all the features of SSL123. In addition, SSL Web Server Certificate provides full organization authentication. SSL for www.domain.com protects domain.com also.
- SSL Web Server Certificate Wild card - This certificate has all the features of SSL Web Server Certificate. In addition, this certificate will work for all sub domains. SSL for www.domain.com protects domain.com also.
- SSL Web Server Certificate with EV - This certificate has all the features of SSL123. In addition, SSL Web Server Certificate with EV provides Extended Validation. EV SSL certificate ensures the highest level of trust and authentication. SSL for www.domain.com protects domain.com also.

You can find the CA certificates for the above certificates in the below links.

- [SSL123](#)
- [SSL Web Server Certificate](#)
- [SSL Web Server Certificate with EV](#)

You can purchase SSL certificate for your domain from [Bytehouse Control Center](#).
