

Unable to Install Mac Application

Are you seeing the message on your Mac with Online Backup application installation "You cannot continue. There is nothing to install"?

If you are having trouble updating or installing the Online Backup application on your Mac, then you may want to see if there is a previous copy of the installer package in the /Library/Receipts/ directory on your Mac. If you remove the relevant installer package from that directory you should then be able to install Online Backup successfully.
