

Dedicated Servers

Install Maldet (Linux Malware Detect) Tool on Linux Servers

If you want to install Maldet which is a Linux Malware Detect tool on your Linux servers, follow the directions below:

1) Log into your dedicated server / VPS container through SSH with root privileges

2) Create a temporary directory and perform the following:

```
=====  
mkdir tmp  
cd tmp  
wget http://www.rfxn.com/downloads/maldetect-current.tar.gz  
=====
```

3) Now you may extract the tar file and navigate to the directory it creates

```
=====  
tar xf maldetect-current.tar.gz
```

```
cd maldetect-*
```

4) Install Maldet by running the following command:

```
=====  
./install.sh  
=====
```

5) You may scan any directory by using the command "maldet -a /path_to_directory"

```
=====  
Eg:
```

```
maldet -a /home  
=====
```
